

Market Correction - Region and Sector Performance Comparison

Last week, the S&P 500 entered correction territory by declining over 10% from the market peak on Jan 26. This most recent sell-off was likely caused by a combination of factors, including wages increasing at a faster pace than market expectations and accompanying inflation fears. A possible consequence would be an increased pace of Fed rate hikes which could put pressure on various regions and sectors. Conversely, strong corporate earnings and global economic expansion continue to provide a supportive backdrop for stocks and unique opportunities to conservatively invest.

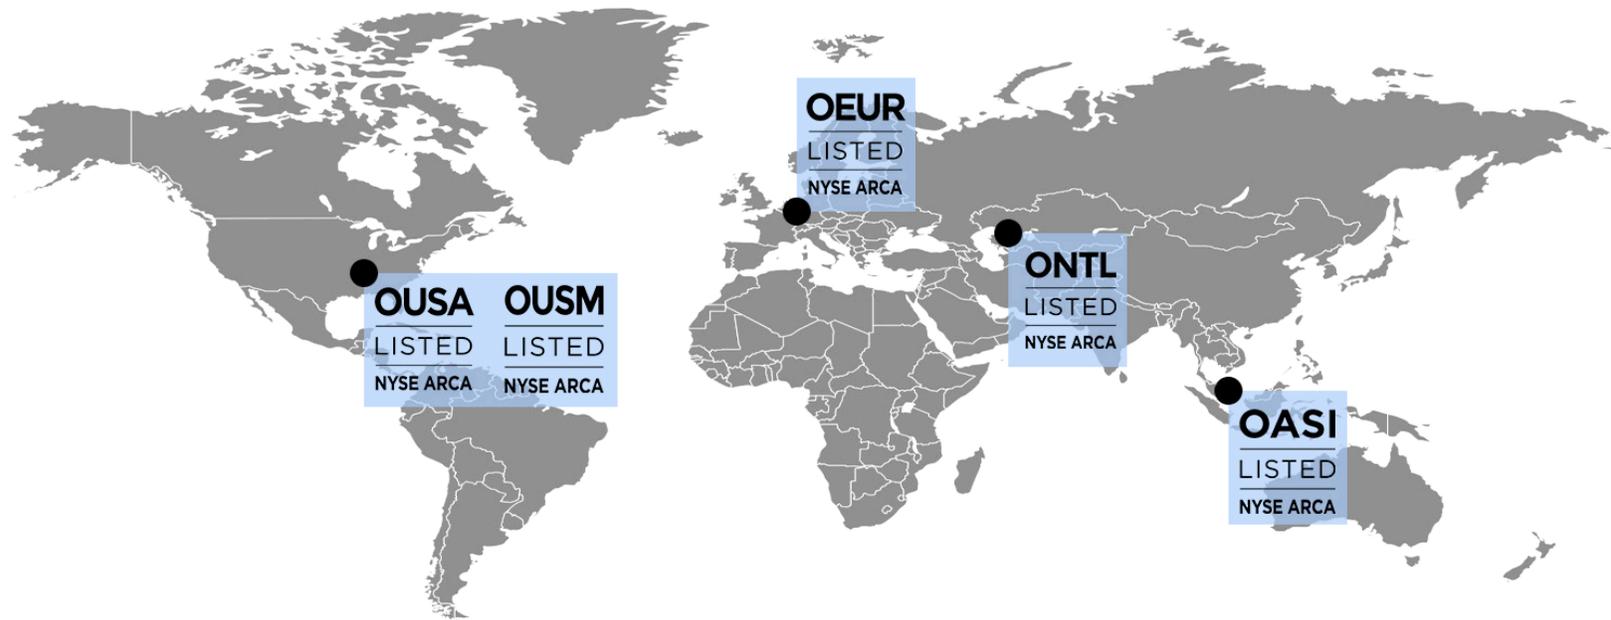

Below, is a performance comparison for various regions and sectors between Jan 26 and Feb 9.

Source: Bloomberg. Data from 01/26/2018 to 02/09/2018. Total returns in USD. S&P 500: S&P 500 Index, Russell 2000: Russell 2000 Index, Europe: EURO STOXX 50 Net Return USD, International: FTSE World Ex US Total Return Index, Asia: MSCI AC Asia Pacific Index.

O'Shares ETFs: ETFs for Conservative Long-Term Investors Consistent investment process focused on Quality, Volatility & Yield

OSHARES.COM | INFO@OSHARES.COM

Before you invest in O'Shares Investments funds, please refer to the prospectus for important information about the investment objectives, risks, charges and expenses. To obtain a prospectus containing this and other important information, please visit www.oshares.com to view or download a prospectus online. Read the prospectus carefully before you invest. There are risks involved with investing including the possible loss of principal.

Concentration in a particular industry or sector will subject the Funds to loss due to adverse occurrences that may affect that industry or sector. The funds may use derivatives which may involve risks different from, or greater than, those associated with more traditional investments. The funds' emphasis on dividend-paying stocks involves the risk that such stocks may fall out of favor with investors and underperform the market. Also, a company may reduce or eliminate its dividend after the Fund's purchase of such a company's securities. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Exposures to foreign securities entail special risks, including political, diplomatic, economic, foreign market and trading risks. In addition, unless perfectly hedged, the Fund's investments in securities denominated in other currencies could decline due to changes in local currency relative to the value of the U.S. dollar, which may affect the Fund's returns. The funds' hedging strategies may not be successful, and even if they are successful, the funds' exposure to foreign currency fluctuations is not expected to be fully hedged at all times. The securities of small capitalization companies are often more volatile and less liquid than the stocks of larger companies and may be more affected than other types of securities during market downturns. Compared to larger companies, small capitalization companies may have a shorter history of operations, and may have limited product lines, markets or financial resources. See the prospectus for specific risks regarding the Fund.

Past performance does not guarantee future results. Shares are bought and sold at market price (not NAV), are not individually redeemable, and owners of the Shares may acquire those Shares from the Funds and tender those shares for redemption to the Funds in Creation Unit aggregations only, consisting of 50,000 Shares. Brokerage commissions will reduce returns.
