

Cloud Infrastructure, \$350 Billion Market by 2024?

Similar to online retail (B2C), a transition to the "Cloud" is occurring in tech services to businesses (B2B). Traditional in-house or off premises data warehouses are becoming obsolete as businesses take their data backup needs to the "Cloud".

Cloud infrastructure services provide the hardware and software components that are needed to support the data storage, computing and networking requirements of a business.

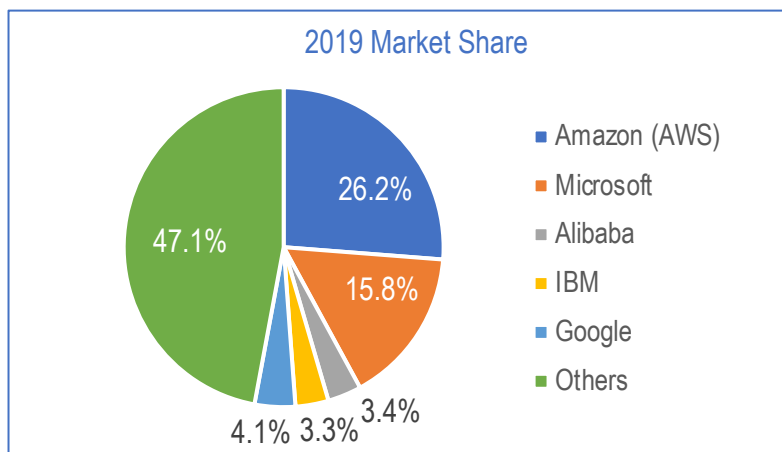

The cloud infrastructure services market grew from just \$30 billion in 2015 to \$112 billion in 2019, representing a growth rate of over 270%. The "Big 4" which include Amazon, Microsoft, Google and Alibaba had combined revenue of over \$50 billion in 2019 and represent about half of the market.

This market is forecasted to grow another 200% by 2024 to over \$350 Billion.

Cloud Infrastructure: +\$100B Market and Growing

The "Big 4" Companies Account for Half of the Market

Source: Bloomberg Finance L.P. Data as of 1/31/2021. B2C: Business to Consumer; B2B: Business to Business.

Market Value	-3.98%	-3.98%	111.11%	29.68%

Data as of 3/31/2021. Holdings subject to change. OGIG launched on June 5, 2018. Performance data quoted represents past performance and is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Returns beyond 1 year are annualized. High performance may be attributable to unusually favorable market conditions that are not likely sustainable over the long-term.

Before you invest in O'Shares ETF Investments Funds, please refer to the prospectus for important information about the investment objectives, risks, charges and expenses. To obtain a prospectus containing this and other important information, please visit oshares.com to view or download a prospectus online. Read the prospectus carefully before you invest. There are risks involved with investing including the possible loss of principal.

Concentration in a particular industry or sector will subject the Funds to loss due to adverse occurrences that may affect that industry or sector. The Funds may use derivatives which may involve risks different from, or greater than, those associated with more traditional investments. A Fund's emphasis on dividend-paying stocks involves the risk that such stocks may fall out of favor with investors and underperform the market. Also, a company may reduce or eliminate its dividend after the Fund's purchase of such a company's securities. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Exposures to foreign securities entail special risks, including political, diplomatic, economic, foreign market and trading risks. In addition, a Fund's investments in securities denominated in other currencies could decline due to changes in local currency relative to the value of the U.S. dollar, which may affect the Fund's returns. See the prospectus for specific risks regarding the Funds.

Companies involved with Internet technology and e-commerce are exposed to risks associated with rapid advances in technology, obsolescence of current products and services, the finite life of patents and the constant threat of global competition and substitutes.

Past performance does not guarantee future results. Shares are bought and sold at market price (not NAV), are not individually redeemable, and owners of Shares may acquire those Shares from the Funds and tender those shares for redemption to the Funds in Creation Unit aggregations only, consisting of 50,000 Shares. Brokerage commissions will reduce returns. The market price of Shares can be at, below, or above NAV. Market Price returns are based upon the midpoint of the bid/ask spread at 4:00 PM Eastern time (when NAV is normally determined), and do not represent the returns you would receive if you traded Shares at other times.
