

OSI ETF Trust

O'Shares Global Internet Giants ETF

NYSE Arca
OGIG

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus (including amendments and supplements) and other information about the Fund, including the Fund's statement of additional information and reports to shareholders, online at www.oshares.com/resources. You can also get this information at no cost by calling 855-637-5383 or by sending an e-mail request to info@oshares.com, or from your financial professional. The Fund's Prospectus and statement of additional information, both dated October 31, 2019, as amended and supplemented from time to time, are incorporated by reference into this Summary Prospectus.

Summary Prospectus October 31, 2019

Shares of the Funds are not individually redeemable and may be purchased or redeemed from each Fund in Creation Units only. The purchase and sale prices of individual shares trading on an Exchange may be below, at or above the most recently calculated net asset value ("NAV") for such shares. Individual shares are listed for trading on NYSE Arca, Inc. ("Exchange" or "NYSE Arca").

The Securities and Exchange Commission has not approved or disapproved these securities or passed upon the accuracy or adequacy of this Summary Prospectus. Any representation to the contrary is a criminal offense.

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of the Funds' annual and semi-annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports. Instead, the reports will be made available on the Funds' website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from the Funds electronically anytime by contacting your financial intermediary (such as your brokerage firm).

Alternatively, you may elect to receive paper copies of all future reports free of charge by contacting your financial intermediary. Your election to receive reports in paper may apply to all Funds held in your account(s) that you invest in through your financial intermediary.

Investment Objective

The Fund seeks to track the performance (before fees and expenses) of the O'Shares Global Internet Giants Index (the "Target Index").

Fees and Expenses

This table describes the fees and expenses you may pay if you buy and hold shares in the Fund. Transaction costs that may be incurred by the investor, such as brokerage commissions for buying and selling securities, are not reflected in the table below.

Annual Fund Operating Expenses (expenses you pay each year as a % of the value of your investment)

Management Fees	0.48%
Distribution and/or Service (12b-1) Fees ⁽¹⁾	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.48%

⁽¹⁾ Pursuant to a Rule 12b-1 distribution and service plan ("Plan"), the Fund may bear a 12b-1 fee not to exceed 0.25% per annum of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees (the "Board") of OSI ETF Trust (the "Trust") has not currently approved the commencement of any payments under the Plan.

Example

The following example is intended to help you compare the cost of investing in the Fund with the costs of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same each year. The example does not reflect any brokerage commissions that you may pay on purchases and sales of Fund shares. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

<u>1 YEAR</u>	<u>3 YEARS</u>	<u>5 YEARS</u>	<u>10 YEARS</u>
\$49	\$154	\$269	\$604

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher turnover rate may indicate higher transaction costs and may result in higher taxes when the Fund's shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 55% of the average value of its portfolio.

Principal Investment Strategies

The Fund seeks to track the performance (before fees and expenses) of the Target Index.

The Target Index is a rules-based index intended to give investors a means of tracking stocks exhibiting quality and growth characteristics in the "internet sector", as defined by O'Shares Investment Advisers, LLC (the "Index Provider" or "Adviser").

The Target Index is constructed using a proprietary, rules-based methodology designed to select equity securities from 2500 global stocks in two main business segments, Internet Technology and Internet Commerce, by identifying companies in the following industries: Application Software, Integrated Telecommunication Services, Interactive Media & Services, Internet & Direct Marketing Retail, Systems Software, Movies & Entertainment, Interactive Home Entertainment and Internet Services & Infrastructure, selecting those that have exposure to the following factors: 1) quality and 2) growth. The selection criteria include requirements for minimum capitalization (adjusted for free float), minimum price and minimum average daily trading volume. The universe of eligible securities includes the 1000 largest U.S. listed companies, the 500 largest European companies, the 500 largest Pacific basin companies and the 500 largest emerging market companies, measured by market capitalization. Constituents of the Fund's Target Index must derive at least 50% of their revenues from Internet Technology and/or Internet Commerce. The "quality" factor is determined primarily by "cash burn rate", the monthly rate that a company uses shareholder capital. Companies with a high ratio of cash burn rate to balance sheet cash and cash equivalents are excluded from the Target

Index. The “growth” factor is measured by revenue growth and stocks are assigned a growth rating. The Target Index excludes pass-through securities such as real estate investment trusts (“REITs”), master limited partnerships (“MLPs”), business development companies (“BDCs”) and closed-end funds (“CEFs”).

Stock weightings in the Target Index are determined according to a modified market capitalization weighting method, using the full market capitalization combined with the growth rating, subject to constraints for diversification and capacity. The diversification constraint limits maximum position weights. The capacity criteria include primary exchange listing, minimum capitalization, minimum price and minimum average daily trading volume requirements. The Target Index is rebalanced quarterly and reconstituted semi-annually. At the quarterly rebalance, a capping methodology is applied to limit individual stock concentration and increase diversification in the Target Index. As of June 30, 2019, the Target Index was comprised of 72 securities.

The Fund may use either a replication strategy or representative sampling strategy in seeking to track the performance of the Target Index. Under a replication strategy, the Fund intends to replicate the constituent securities of the Target Index as closely as possible. Under a representative sampling strategy, the Fund would invest in what it believes to be a representative sample of the component securities of the Target Index. The Fund may use a representative sampling strategy when a replication strategy might be detrimental to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of securities to follow the Target Index (e.g., where the Target Index contains component securities too numerous to efficiently purchase or sell); or, in certain instances, when a component security of the Target Index becomes temporarily illiquid, unavailable or less liquid. The Fund may also use a representative sampling strategy to exclude less liquid component securities contained in the Target Index from the Fund’s portfolio in order to create a more tradable portfolio and improve arbitrage opportunities. To the extent the Fund uses a representative sampling strategy, it may not track the Target Index with the same degree of accuracy as would an investment vehicle replicating the entire index.

Under normal market conditions, the Fund will invest at least 80% of its total assets in the components of the Target Index. To the extent that the Target Index concentrates (i.e., holds 25% or more of its net assets) in the securities of a particular industry or group of industries, the Fund is expected to concentrate to approximately the same extent. As of June 30, 2019, the Communication Services, Consumer Discretionary and Information Technology sectors each represented a substantial portion of the Target Index. The Target Index provides exposure to various global markets, including emerging markets. As of June 30, 2019 the Target Index included the following countries: Argentina, Canada, China, Germany, Japan, Sweden, Switzerland, United Kingdom and the United States.

The Fund may invest up to 20% of its total assets in investments not included in the Target Index, but which Vident Investment Advisory, LLC (the “Sub-Adviser”) believes will help the Fund track the Target Index. For example, there may be instances in which the Sub-Adviser may choose to purchase or sell investments, including exchange-traded funds (“ETF”) and other investment company securities, and cash and cash equivalents, as substitutes for one or more Target Index components or in anticipation of changes in the Target Index’s components.

The Fund is classified as “non-diversified” under the Investment Company Act of 1940, as amended (the “1940 Act”), which means that a relatively high percentage of the Fund’s assets may be invested in a limited number of issuers.

The Target Index methodology was developed by the Index Provider, an affiliate of the Fund.

Principal Investment Risks

There can be no guarantee that the Fund will achieve its investment objective. The Fund is an ETF, not a bank deposit, and is not guaranteed or insured by the Federal Deposit Insurance Corporation or any other government agency. The value of your investment may fall, sometimes sharply, and you could lose money by investing in the Fund. The Fund is subject to the principal investment risks noted below, any of which may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and ability to meet its investment objective.

Market Events Risk. The market values of the Fund’s investments, and therefore the value of the Fund’s shares, will go up and down, sometimes rapidly or unpredictably. Market risk may affect a single issuer, industry or section of the economy, or it may affect the market as a whole. Turbulence in the financial markets and reduced liquidity may negatively affect issuers, which could have an adverse effect on the Fund. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve and/or other government actors, such as increasing interest rates, could cause increased volatility in financial markets and disruption in the creation/redemption process of the Fund, which could have a negative impact on the Fund.

Multifactor Risk. The Target Index, and thus the Fund, seeks to achieve specific factor exposures identified in the Fund's principal investment strategies above. There can be no assurance that targeting exposure to such factors will enhance the Fund's performance over time, and targeting exposure to certain factors may detract from performance in some market environments. There is no guarantee the Index Provider's methodology will be successful in creating an index that achieves the specific factor exposures identified above.

Internet Companies Risk. Companies involved with the internet, technology and e-commerce are exposed to risks associated with rapid advances in technology, obsolescence of current products and services, the finite life of patents and the constant threat of global competition and substitutes. In addition to these risks, these companies may be adversely impacted by market and economic cyclicalities and changing industry standards.

Quality Stocks Risk. This style of investing is subject to the risk that the past performance of these companies does not continue or that the returns on "quality" equity securities are less than returns on other styles of investing or the overall stock market. In addition, there may be periods when quality investing is out of favor and during which the investment performance of a fund using a quality strategy may suffer.

Growth Securities Risk. The Fund will invest in securities exhibiting growth characteristics. Growth securities may be more volatile and perform differently than the broad market. They may underperform when compared to securities with different characteristics. Growth securities may be sensitive to economic conditions and tend to perform better during periods of economic recovery. As a result, growth securities may outperform or underperform the broad market over time.

Foreign Investment Risk. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Exposures to foreign securities entail special risks, including due to: differences in information available about foreign issuers; differences in investor protection standards in other jurisdictions; capital controls risks, including the risk of a foreign jurisdiction imposing restrictions on the ability to repatriate or transfer currency or other assets; political, diplomatic and economic risks; regulatory risks; and foreign market and trading risks, including the costs of trading and risks of settlement in foreign jurisdictions. Current political uncertainty surrounding the European Union ("EU") and its membership, including the 2016 referendum in which the United Kingdom voted to exit the EU, may increase market volatility. In addition, the Fund's investments in securities denominated in other currencies could decline due to changes in local currency relative to the value of the U.S. dollar, which may affect the Fund's returns.

Geographic Concentration Risk. Because the Fund's investments may be concentrated in a particular geographic region or country, the value of Fund shares may be affected by events that adversely affect that region or country and may fluctuate more than that of a less concentrated fund.

China Risk. Investments in Chinese securities, including certain Hong Kong-listed securities, subject the Fund to risks specific to China. China may be subject to considerable degrees of economic, political and social instability. China is an emerging market and demonstrates significantly higher volatility from time to time in comparison to developed markets. Over the last few decades, the Chinese government has undertaken reform of economic and market practices and has expanded the sphere of private ownership of property in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. Internal social unrest or confrontations with other neighboring countries, including military conflicts in response to such events, may also disrupt economic development in China and result in a greater risk of currency fluctuations, currency non-convertibility, interest rate fluctuations and higher rates of inflation. China has experienced security concerns, such as terrorism and strained international relations. Incidents involving China's or the region's security may cause uncertainty in Chinese markets and may adversely affect the Chinese economy and the Fund's investments. Export growth continues to be a major driver of China's rapid economic growth. Reduction in spending on Chinese products and services, institution of additional tariffs or other trade barriers, including as a result of heightened trade tensions between China and the U.S., or a downturn in any of the economies of China's key trading partners may have an adverse impact on the Chinese economy.

Index-Related Risk. The Fund is managed with an investment strategy that attempts to track the performance of the Target Index. As a result, the Fund expects to hold constituent securities of the Target Index regardless of their current or projected performance. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund's return to be lower than if the Fund employed an active strategy.

Risks related to the Index Provider. There is no assurance that the Index Provider or the index calculation agent will compile the Target Index accurately, or that the Target Index will be determined, composed or calculated accurately. While the Index Provider provides descriptions of what the Target Index is designed to achieve, the Index Provider does not

guarantee the quality, accuracy or completeness of data in respect of its indexes, and does not guarantee that the Target Index will be in line with its described index methodology. Any gains, losses or costs to the Fund that are caused by Index Provider or index calculation agent errors will therefore be borne by the Fund and its shareholders. The Target Index is new and has a limited performance history. The foregoing risks may be greater for a new index.

Sampling Risk. To the extent the Fund uses a representative sampling approach, it will hold a smaller number of securities than are in the Target Index. As a result, an adverse development respecting a security held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Target Index. Conversely, a positive development relating to a security in the Target Index that is not held by the Fund could cause the Fund to underperform the Target Index. To the extent the assets in the Fund are smaller, these risks will be greater.

Tracking Error Risk. Tracking error is the divergence of the Fund's performance from that of the Target Index. Tracking error may occur due to, among other things, fees and expenses paid by the Fund, including the cost of buying and selling securities that are not reflected in the Target Index. If the Fund is small, it may experience greater tracking error. If the Fund is not fully invested, holding cash balances may prevent it from tracking the Target Index. In addition, the Fund's NAV may deviate from the Target Index if the Fund fair values a portfolio security at a price other than the price used by the Target Index for that security. To the extent the Fund uses a representative sampling strategy to track the Target Index, such a strategy may produce greater tracking error than if the Fund employed a full replication strategy.

Premium-Discount Risk. Fund shares may trade above or below their NAV on the Exchange. The market prices of Fund shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Fund shares. Therefore, you may pay more than NAV when you buy shares of the Fund on the Exchange, and you may receive less than NAV when you sell those shares on the Exchange. This risk is separate and distinct from the risk that the NAV of Fund shares may decrease.

Secondary Market Trading Risk. Investors buying or selling Fund shares in the secondary market may pay brokerage commissions or other charges, which may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Fund shares. Although the Fund's shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Fund shares on the Exchange may be halted.

International Closed Market Trading Risk. Because the Fund's underlying securities trade on markets that may be closed when the Exchange is open, there are likely to be deviations between current pricing of an underlying security and stale pricing resulting in the Fund trading at a discount or premium to NAV that may be greater than those incurred by other ETFs.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act, which means that the Fund may invest a relatively high percentage of its assets in a limited number of issuers. As a result, the Fund may be more susceptible to a single adverse economic or regulatory occurrence affecting one or more of these issuers, experience increased volatility and be highly invested in certain issuers.

Concentration Risk. To the extent that the Target Index is concentrated in a particular industry or group of industries, the Fund is also expected to be concentrated in that industry or group of industries, which may subject the Fund to a greater loss as a result of adverse economic, business or other developments affecting that industry or group of industries.

Sector Risk. To the extent the Target Index, and thereby the Fund, emphasizes, from time to time, investments in a particular sector, the Fund is subject to a greater degree to the risks particular to that sector. Market conditions, interest rates, and economic, regulatory, or financial developments could significantly affect all the securities in a single sector. If the Fund invests in a few sectors, it may have increased exposure to the price movements of those sectors.

Communication Services Sector Risk. Companies in the communications sector may be affected by industry competition, substantial capital requirements, government regulation, cyclicity of revenues and earnings, obsolescence of communications products and services due to technological advancement, a potential decrease in the discretionary income of targeted individuals and changing consumer tastes and interests.

Consumer Discretionary Sector Risk. The consumer discretionary sector may be affected by changes in domestic and international economies, exchange and interest rates, competition, consumers' disposable income, consumer preferences, social trends and marketing campaigns.

Information Technology Sector Risk. Information technology companies face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights. Companies in the software industry may be adversely affected by, among other things, the decline or fluctuation of subscription renewal rates for their products and services and actual or perceived vulnerabilities in their products or services.

Equity Investing Risk. An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Large Capitalization Securities Risk. The securities of large market capitalization companies may underperform other segments of the market because such companies may be less responsive to competitive challenges and opportunities and may be unable to attain high growth rates during periods of economic expansion.

Small and Mid-Capitalization Securities Risk. The securities of small and mid-capitalization companies are often more volatile and less liquid than the securities of larger companies and may be more affected than other types of securities during market downturns. Compared to larger companies, small and mid-capitalization companies may have a shorter history of operations, and may have limited product lines, markets or financial resources.

ETFs and Other Investment Companies Risk. The risks of investing in securities of ETFs and other investment companies typically reflect the risks of the types of instruments in which the underlying ETF or other investment company invests. In addition, with such investments, the Fund indirectly bears its proportionate share of the fees and expenses of the underlying entity. As a result, the Fund's operating expenses may be higher and performance may be lower.

Depository Receipts Risk. The risks of investments in depository receipts are substantially similar to Foreign Investment Risk. In addition, depository receipts may not track the price of the underlying foreign securities and their value may change materially at times when the U.S. markets are not open for trading.

Liquidity Risk. Liquidity risk exists when investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund or an entity in which it invests may be unable to transact at advantageous times or prices.

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may purchase and redeem Fund shares directly from the Fund ("Authorized Participants"). To the extent they cannot or are otherwise unwilling to engage in creation and redemption transactions with the Fund and no other Authorized Participant steps in, shares of the Fund may trade like closed-end fund shares at a significant discount to NAV and may face trading halts and/or delisting from the Exchange. This risk may be more pronounced in volatile markets, potentially where there are significant redemptions in ETFs generally.

Cash and Cash Equivalents Risk. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising.

Performance Information

Performance information will be available in the Prospectus after the Fund has been in operation for one full calendar year. When provided, the information will provide some indication of the risks of investing in the Fund by showing how the Fund's average annual returns compare with a broad measure of market performance. Past performance does not necessarily indicate how the Fund will perform in the future.

Management

Investment Adviser: O'Shares Investment Advisers, LLC

Sub-Adviser: Vident Investment Advisory, LLC

Portfolio Managers: The following table lists the persons responsible for day-to-day management of the Fund's portfolio:

<u>Employee</u>	<u>Length of Service</u>	<u>Title</u>
Denise M. Krisko, CFA	Since inception	Co-Portfolio Manager
Austin Wen, CFA	Since October 2018	Co-Portfolio Manager

Purchase and Sale of Fund Shares

The Fund is an ETF. Individual Fund shares may only be purchased and sold on a national securities exchange through a broker-dealer and investors may pay a commission to such broker-dealers in connection with their purchase or sale. The price of Fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The Fund will only issue or redeem shares aggregated into blocks of 50,000 shares or multiples thereof (“Creation Units”) to Authorized Participants who have entered into agreements with the Fund’s distributor. The Fund will issue or redeem Creation Units in return for a basket of assets that the Fund specifies each day.

Tax Information

The Fund’s distributions are expected to be taxable as ordinary income or capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. Such tax-advantaged arrangements may be taxed as ordinary income upon withdrawal of monies from those arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser or its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s web site for more information.
